A Fit-optimize-test paradigm
1 Record neural data
Natural images and
neural responses {(xᵢ, yᵢ)}
2 Fit encoding model
Ridge regression with
cross-validated layer and penalty selection
3 Feature accentuation
x ← x₀; regularized updates
x ← x ± η∇ₓ fₘ(x)
until fₘ(x*) = r*
4 Test neural control
Record neural responses to
each model's accentuated
images x*
