

Exact conditional Gaussian geometry of ridge estimators (fixed design X)

a Fixed $\lambda = 0.05$ ($\kappa = 0.0518$); vary σ^2 on log grid

b Fixed $\sigma^2 = 0.5$; vary λ/κ on log grid

- prediction iso-error E_{gen}
- control optimum $z = 0$
- exact 68% Gaussian ellipse
- control iso-error $z \neq 0$
- one coupled realization
- conditional mean path
